

Network Management Module

Identify and create your preferred network to improve quality and outcomes and gain market share using accurate data-driven methods.

Don't take risk without creating a high-performing network first! Salient's Advanced In/Out Network and Geo functions enable you to identify the most appropriate network of providers for your patients while also mitigating leakage issues via a robust performance tracking program.

Prioritize where your population health efforts should be focused! Increase market share using an assignables analysis that can drive accountability to your providers and help decode plurality challenges.

Components of the Module

Advanced In/Out Network:

- Uncover which providers or facilities would be valuable assets to your preferred network.
- Analyze network leakage impacts and identify which patients and providers are most responsible.
- Monitor network performance using volume, frequency, and cost metrics.

Geo:

- Identify best-fit providers and facilities based on beneficiary location.
- Learn spatial patterns of utilization.

Assignables:

- Understand who the assignable population is, their spend, and their risk.
- Identify who they would be attributed to if they gained attribution.
- Determine the level of effort needed to convert assignables into attributed members based on utilization with Salient's proprietary Likelihood Logic.
