# What's New in Salient Mobile

## **Version 1.9.15**

### **Notifications**

The Notify capability in Salient Dashboards V7.60+ sends automated notifications based on dashboard data and custom business rules. For example, get notifications for low volumes, margin thresholds, out-of-stocks, pricing issues, increasing costs, and much more, according to your organization's preferred schedule (daily, weekly, etc.). Notifications may be sent whenever data meets test criteria or when the status of something changes.

Salient notifications appear on your device just like other notifications. (Notifications must be allowed.) Simply tap to open the underlying data in the Salient mobile app. As always, the mobile view is interactive and drillable, offering opportunities for further investigation.

Notifications may also be sent as email messages.

To set up notifications, go to the Notify area of Salient browser-based dashboards (V7.60+). See the help for more information. Additional installation and configuration are required for Notify.

### **Custom views**

Custom views provide endless ways to visualize dashboard data. Dashboard Designers can build custom views using HTML, JavaScript, and a simple, built-in scripting language, to make them available in Salient browser-based dashboards and the mobile app. (Salient Dashboards Version 7.60 or higher is required.) Built-in templates include simple text recommendations, bullet charts, image overlays, and more. For example:

#### Goal percentage

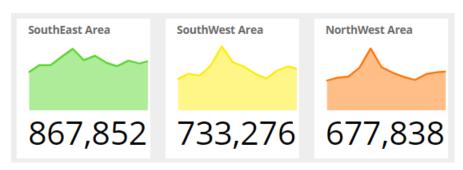

#### Tile view

SouthEast	SouthWest	NorthWest
Area	Area	Area
73,794	60,364	57,685
East Area <b>57,196</b>	Near West Area 20,767	NorthEast Area 118

#### Volume comparative

#### Mutli trend

### Single sign-on (SSO)

This version supports single sign-on (SSO) authentication using the new Salient Authentication service and an external Identity Provider (IdP). Additional installation and configuration are required. Contact Salient for more information.

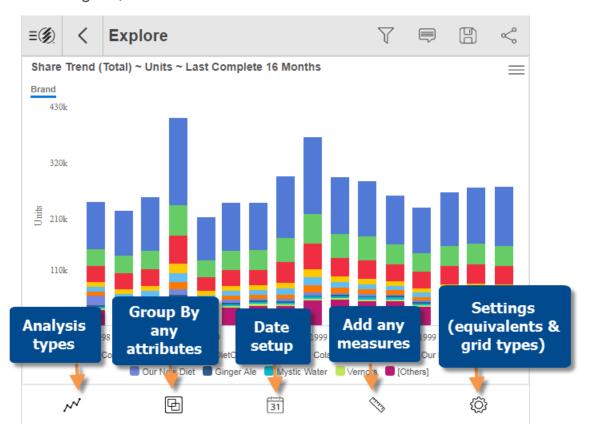

### Support for new dashboard design options

Salient Mobile supports design enhancements in Salient Dashboards Version 7.50:

- Dashboards can use new color palettes, including built-in palettes that come with Version 7.50 and custom palettes configured by your organization. Like other design options, color palettes are selected during dashboard creation.
- Highlighting is available for totals, averages, and subtotals, to make it easier to identify summary metrics that fall within or outside of expected ranges. (Highlight settings must be built into the dashboard during creation.)

### Explore the data

Perform advanced data investigation in a new "explore" mode within the mobile app. Pick any widget or a built-in starting point and then see where the data leads. Tools at the bottom of the screen allow you to interrogate the data: change the analysis type; group the data by more attributes (any available in the dataset); add any measures; change the date range; customize grids; and more.

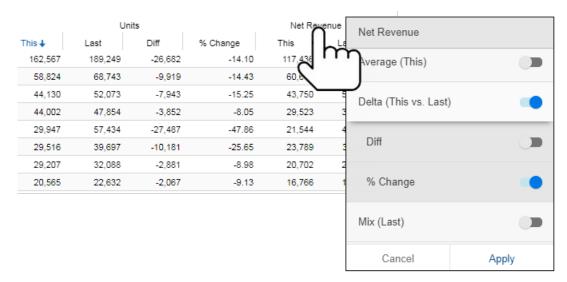

After exploring, you can optionally save changes in a new dashboard.

Explore mode requires Power Viewer licensing or higher. This capability may be disabled by your administrator.

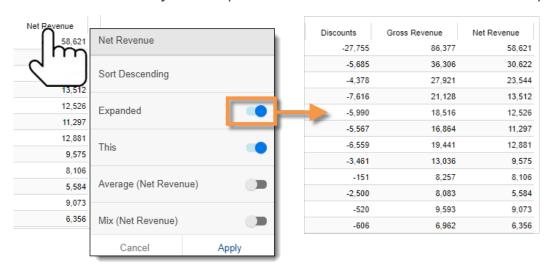

### Mix, % change, and other computations

Add performance calculations, including mix (percent of the total), % change, difference, and average per period, in grids of numbers.

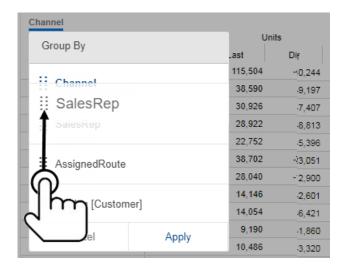

## Expand a calculated measure

This version allows you to expand a calculated measure to see its components.

### Set your own downlevel order

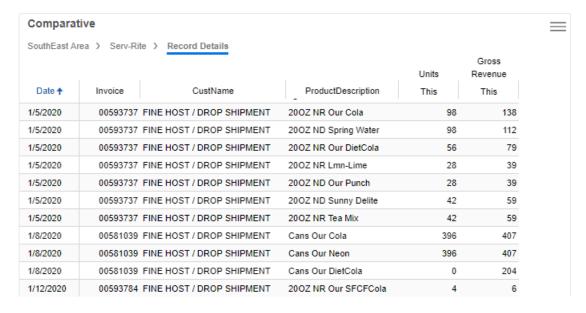

Choose the order of attributes used when expanding members or drilling down. Just drag and drop in the menu (requires Power Viewer licensing or higher).

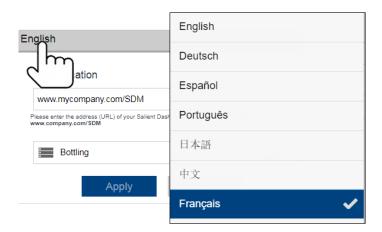

### Record details

Salient Mobile can show record-level data (e.g. invoices, work records, inventory, etc.). Record details may include dates (single date for transactions or start/end dates for non-transactional data), measures, key descriptions, dimensions, and invoice numbers (if configured).

This capability is available as a new grouping method. Both grid and graph formats are available. The details may be filtered to show any subset of data records for any timeframe.

The Salient Mobile app is available in French. You can choose a language in the login setup screen. (The dataset language is configured separately.)

## Version 1.9.9

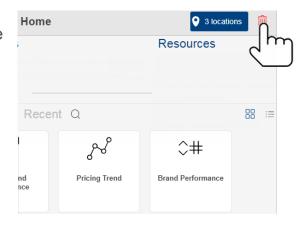

This version adds support for accessing Salient Dashboards via a Microsoft Azure Application Proxy.

### Clear filters faster

It is now easier to remove filters when you want to show more data.

#### Clear all location filters

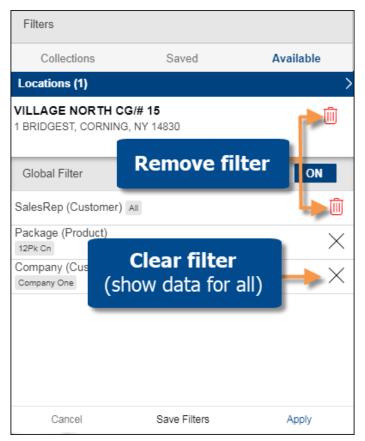

Tap the trash icon in the corner of the home screen to turn off all location filters at once.

#### Clear individual filters

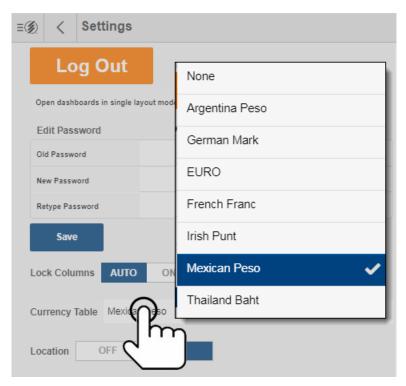

In the Filters panel, tap the X to clear a dimension or key filter (i.e., show data for <u>all</u> members).

Tap the trash icon to completely remove a filter. Key and dimension filters must be cleared before you can remove them.

### **Currency selection**

You can change the currency from within the mobile app. Go to the Settings area and pick your preferred currency. (The dataset configuration must include currency tables.)

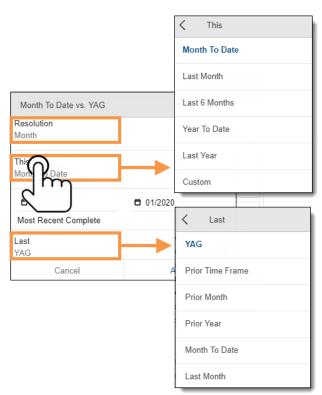

This version supports new features in Salient Dashboards that give Designers more control over dashboard appearance and functionality. These features require Salient Dashboards Version 7.10 SP1 or higher.

- Grid/graph toggling may be restricted by the Designer to provide users with simpler, pre-configured displays.
- Graphs can use custom highlighting colors (if configured).
- In trend, comparative, and multi comparative widgets, custom graph labels allow Designers to apply meaningful terminology and simplify graphs.

## Version 1.9.5

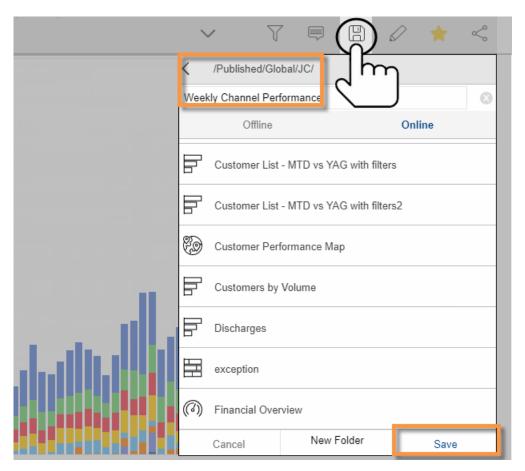

### Quick-pick date options

Choose from the same easy date options that are available in browser-based dashboards. For example, see the month-to-date, last month, last six months, or year-to-date compared to a previous timeframe. Select a resolution, and then tap and choose on whatever timeframe interests you.

## Save your own customized dashboards

This version lets you save your own dashboards within the mobile app (Power Viewers and Dashboard Designers only). Customize dashboards by filtering, selecting measures, and more, and them save them to create a set of dashboards for your own unique purposes. Depending on account settings, you may be able to save private and/or global (i.e., shared) dashboards.

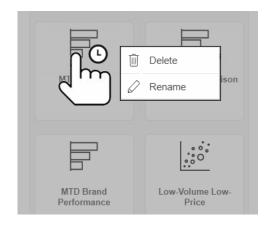

### Manage dashboards

The mobile app now provides dashboard management features so you can organize your dashboards while you are on the go.

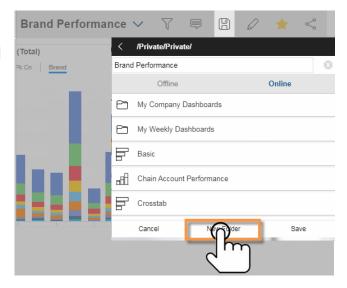

#### Delete and rename dashboards

TAP AND HOLD to delete or rename a dashboard or dashboard folder.

#### Create dashboard folders

You can create your own folders for organizing dashboards (Power Viewers and Dashboard Designers only). This option is available when saving a dashboard.

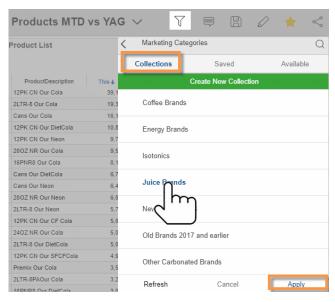

### Advanced filtering

#### **Custom collections**

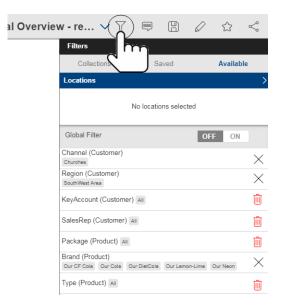

You can create and apply custom collections of members to narrow down on your preferred areas of the business (Dashboard Designers and Power Viewers only). Collections can be saved for future use and/or utilized for ad-hoc filter selection. Collections can be used in other dashboards and by other users (if global).

Go to the Collections area in the Filters panel to choose an existing collection or create your own.

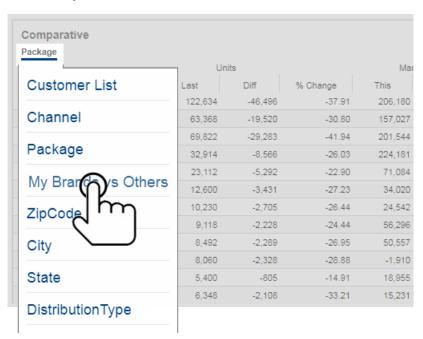

### More types of filters

The filters panel includes more types of filters in this version. If global filters are off, this includes all workspace filters built into the dashboard as well as collection-based filters. If global filters are on, this includes all applicable global filters, which are expanded in this version to include any global filter used as a Group By or workspace filter in the dashboard.

## Custom ways of grouping the data

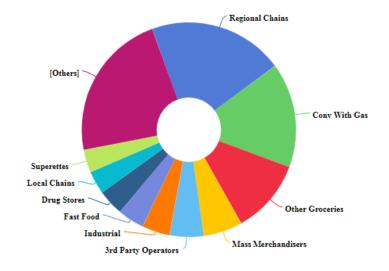

Dashboard Designers can create custom ways of grouping the data, called "custom groups." In the mobile app, you can pick a custom group just like a regular "Group By" to roll up and compare custom collections by performance, history, business initiatives, or any other way.

### Improved graphs

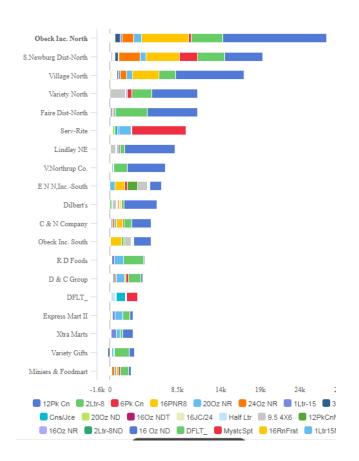

### Pie chart insights

Labels show who or what each slice represents, allowing for a simpler graph without a legend. The labels type must be preconfigured into the dashboard.

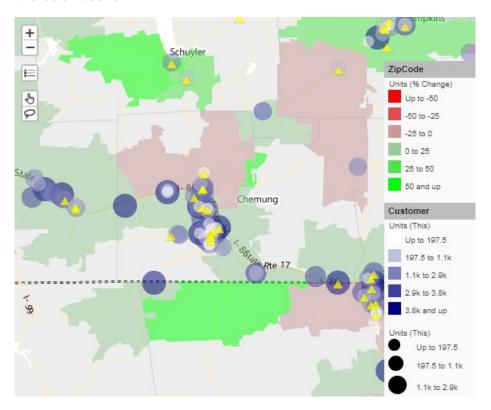

### Improved two-way graphs

The new horizontal format of the Crosstab graph shows more data on the screen. This graph type must be pre-configured into the dashboard.

### Map enhancements

Transparency is available in Geo maps to make them easier to read. In addition, custom buckets of data can now be used to match up ranges of data to specific colors (e.g., green for positive change and red for negative change). These settings must be pre-configured in the dashboard.

### Global filtering

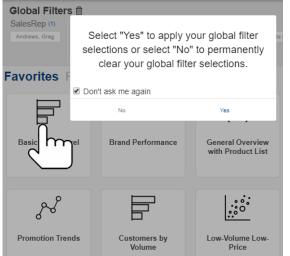

You can turn on global filters to re-use them across multiple dashboards. This enhancement makes it easy to stay focused on any area of the business while viewing the data in a variety of dashboards and widgets.

To select global filters, open a dashboard, make sure that global filtering is on, and choose what you want to see. Global filters can utilize saved filter sets or you can make your own selection when you turn the filter on.

You can then apply the global filters to any other dashboard by simply opening the dashboard. Note that only applicable filters will be applied.

Product List 🗸 Filters Collections Available Locations 55 41 No locations selected 21 13 Global Filter KeyAccount (Customer) All SalesRep (Customer) Andrews, Greg Package (Product) 16 Oz ND 16JC/24 16JC12 16RnFrst Brand (Product) All Ŵ Brand (Product) Ŵ

The home screen shows a snapshot of the global filters that are currently on and lets you remove them.

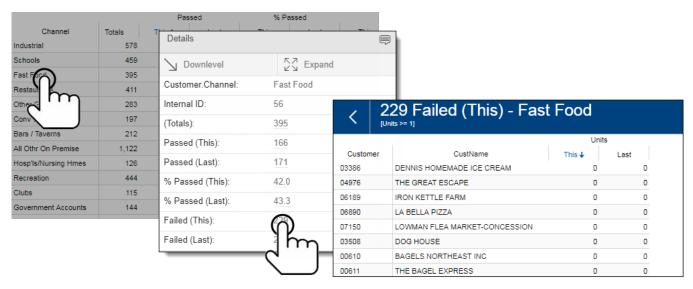

You will receive a prompt to apply global filters when you open a dashboard with global

#### What's New in Salient Mobile

filters on for the first time. After that, global filters will be automatically applied each time you open a dashboard. You can control this behavior (i.e., automatically apply global filters or show prompt) in user settings.

### Pass/fail details

In an Exception grid or graph, just tap to see details and tap again to see underlying lists of passing, failing, or total members (e.g. customers who did or did not buy).

### Location maps

This version allows you to map nearby locations that are defined within the dataset (for example, nearby customers or assets). In previous versions, the nearby locations were shown in a list format. Now an interactive map is also available.

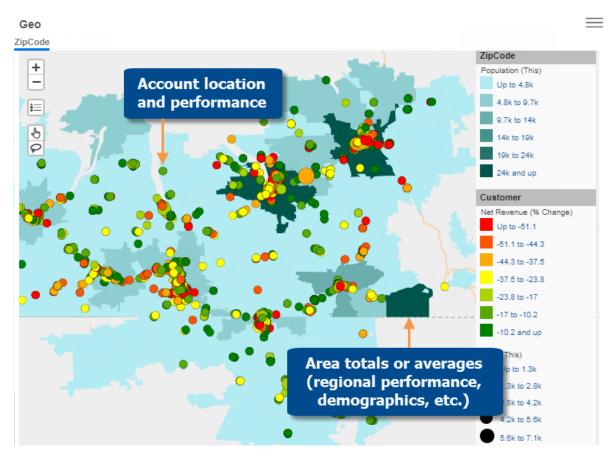

You can pan and zoom in the map to see details or look at a different area. Just click to re-run the search within any map extent (for example, find nearby locations for an area that you plan to visit in the future). The map lets you easily find out more about any location. Tap on a location in the map to see details or mark a location in the list to make it easy to spot in the map. Additional setup is required.

### Geo

A Geo widget is now available to provide geospatial intelligence in dashboards. Maps can include markers that show precise account locations and performance (e.g., size and color may represent data values, change, etc.). In addition, the map can shade areas based on data totals or averages to reveal performance trends and areas of interest. The map is interactive: pan, zoom, select markers, list them out, filter, etc., as you follow the data wherever it leads. The Geo widget requires additional server installation and setup.

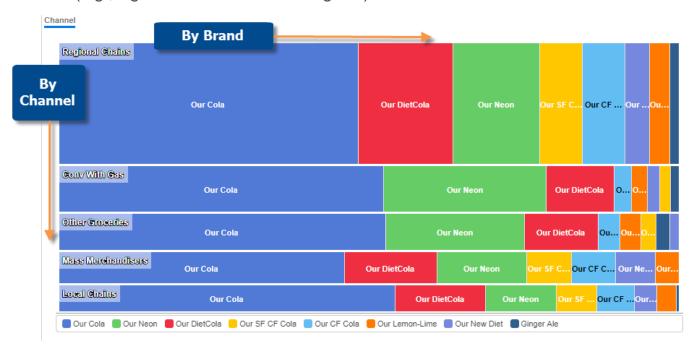

### See it two ways at once

New formats of the Crosstab widget are available to visually represent change or intensity broken down two ways at once. The graph can be customized to show data values, change since another timeframe, and/or attributes, to provide endless possibilities for visual data analysis. Here are just a few examples:

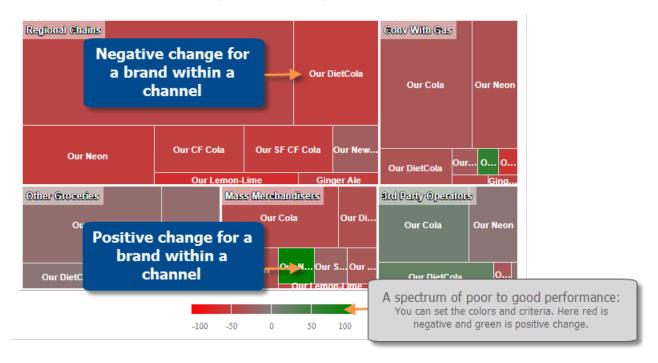

### Two-way share graphs

The Mondrian makes it easy to spot which items are most significant across another attribute (e.g., significant brands across regions).

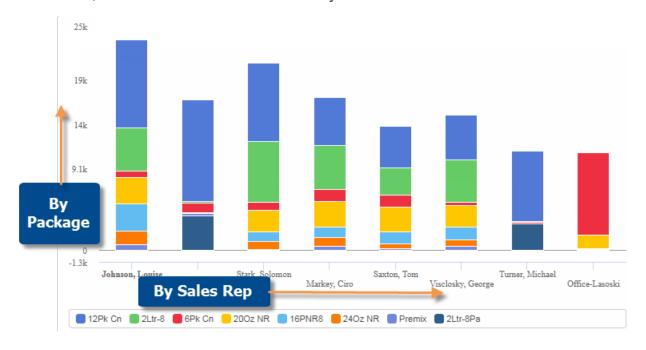

### Visualizations for gains and losses

The DeltaMap can reveal significant changes since another timeframe

#### Totals and details in one view

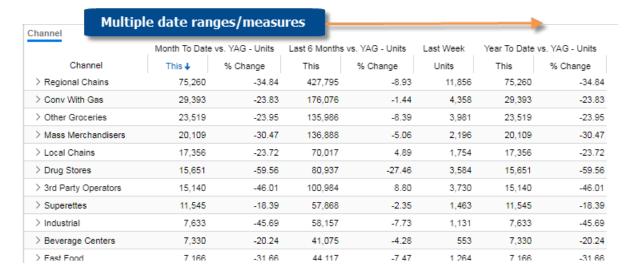

The Stacked Bar graph compares totals across an attribute (e.g., sales reps) and, at the same time, breaks the data down further by another attribute.

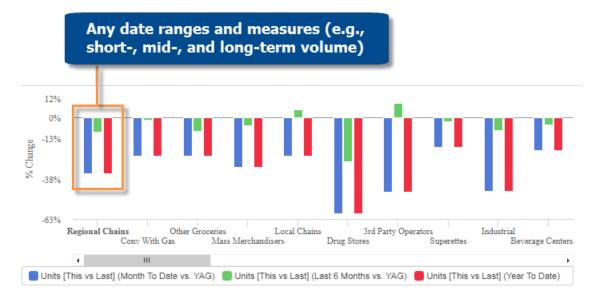

### Multiple customized timeframes

The Multi Comparative widget can include any combination of custom date ranges for any measures. For example, compare weeks, months, and year-to-date to earlier date ranges.

### Multi Comparative grids

### Multi Comparative graphs

### Improved filtering

#### More control over filters

This version of dashboards introduces new types of interactive filters to help users narrow down on the exact piece of information needed. You can edit or remove most types of filters using the breadcrumb path at the top of the widget and/or the filter panel.

#### Linked filters

In this version, the filter panel automatically limits selections based on other filters in the panel. This makes it easier to choose data that is available and relevant.

### Date range enhancements

#### Easier date selection

When changing the dates, you can select the "resolution," which is the type of timeframe (e.g., day, week, month, etc.). This enhancement allows for easier date selection because you don't need to pick start and end dates down to the specific day for most resolution types.

### Relative/moving timeframes

You can pick a date range that updates over time (e.g., most recent month, most recent two months, last week, etc.) in widgets that are set up to use relative date ranges.

### More efficient dashboard loading

Widgets are now loaded on an "as needed" basis (i.e., only what's on the screen). This results in faster loading of dashboards that have multiple widgets available via swipe.

### Security & usability

You will receive a prompt when it's time to change your password.
